

Electro G

Electro G has been formulated for use as an Electrolyte and Nutritional Supplement in young calves, lambs and foals.

Electro G is a powdered Electrolyte product that is designed to dissolve quickly in warm water and be absorbed efficiently. Electro G is a four-day treatment course.

Electro G has the unique ability to be fed as an extra supplement with the normal milk or milk replacement ration. This ensures that the young animal continues to receive all the necessary nutrients for normal growth and development through out the treatment period.

Electro G:

- Corrects low blood sugar levels
- Provides rapid energy supply
- Corrects dehydration problems
- Restores sodium levels
- Improves protein utilization
- Restores intracellular potassium levels

Background Information

Propharma has over 30 years experience in providing products and services to the stockfeed industry.

Team

Rodney Griffiths, *Company Director*, has an experienced team of professionals driving the business:

- Lesley Smith, *General Manager* is assisted by:
- Dr. Geoff Irish, *Nutritionist & Technical Sales Manager*
- Andrew Patrzalek, *Sales & Nutrition Consultant*

Client Base

- Agri Business
- Farmers
- Feedmills
- Feedlots

Products

- Custom formulations of feed and premixes.
- Contract manufacturer of speciality premix formulations including vitamin & mineral premixes in liquid and powder form for all species including: primate, equine, bovine, porcine, avian, canine, feline, ruminant, monogastric and aquaculture.

Services

- Nutritional Advice
- Blending and Packing
- Milling and Sieving
- Customised Production Runs

Licences

- Australian Pesticides and Veterinary Medicines Authority (APVMA) Licence No. 4025
- FeedSafe® Accreditation No. 0113
- S4 Poisons Licence
- HACCP

Product Brief

Electro G - is formulated for use as an Electrolyte and Nutritional Supplement in young calves, foals and lambs

- readily dissolves in water and is easily absorbed
- is fed as a supplement to normal milk/milk replacer ration

Active Ingredients

Dextrose: Efficiently replenishes blood glucose levels to correct hypoglycaemia and stimulates electrolyte and water assimilation.

Sodium Acetate: Rapidly metabolised, provides an immediate energy source plus adequate alkalising levels to correct acidosis without inhibiting milk clotting.

Sodium Chloride: Restores sodium and is a major factor in the assimilation of water to effectively correct dehydration.

Glycine: Promotes intestinal absorption of water and sodium and helps spare protein utilisation for energy purposes.

Potassium Chloride: Restores normal intracellular potassium levels to correct hypokalemia.

Sizes

Electro G is supplied in 5, 10 or 20kg tubs. Store in cool, dark and dry place.

Direction for Use

General Notes: The initial dose does not have to coincide with a feed time. It is important to administer Electro G as soon as illness is detected to prevent dehydration.

Feed Electro G as an extra meal before feeding milk or milk replacer. If milk is refused, administer Electro G and resume milk feeding at the next meal.

Mixing Rate: Prepare the solution JUST PRIOR TO USE. Use 50gm (1 scoop) of Electro G per litre of warm water and stir thoroughly until dissolved.

Calves & Foals

Initial Dose:

Mix 100gm (2 scoops) of Electro G in two litres of WARM water and administer.

Days 1 & 2 (AM & PM):

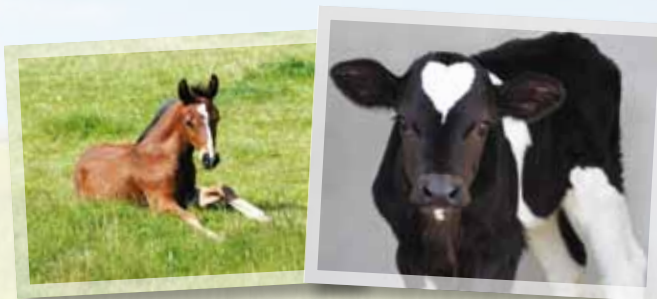

Mix 100gm (2 scoops) of Electro G in two litres of WARM water and administer Electro G solution before offering milk or milk replacer.

Days 3 & 4 (AM & PM):

Mix 50gm (1 scoop) of Electro G in one litre of WARM water. Combine with one litre of milk or milk replacer and feed before offering milk or milk replacer.

Day 5:

Resume normal feeding.

Lambs

Initial Dose:

Mix 25gm (1/2 scoop) of Electro G in 1/2 litre of WARM water.

Days 1 & 2 (AM & PM):

Mix 25gm (1/2 scoop) of Electro G in 1/2 litre of WARM water and administer Electro G solution before offering milk or milk replacer.

Days 3 & 4 (AM & PM):

Mix 12.5gm (1/4 scoop) of Electro G in 1/4 litre (250ml) of WARM water. Combine with one litre of milk or milk replacer and feed before offering milk or milk replacer.

Day 5:

Resume normal feeding.
